

Journeys Of Discovery

(NAPS)—The more hands-on, the better. That learning axiom is best applied to the sciences, in order to help students get a firmer grasp not just on specific concepts, but the world around them as well.

In today's classrooms, the "scientific method" is incomplete without textbooks that foster learning about the sciences.

A love of science often begins or is fostered in the classroom, and in this regard a teacher's best friend can be a well-designed textbook. Fortunately, today's educational series make it easier for students to put scientific principles into action.

For example, *Science Plus*, published by Holt Rinehart and Winston (HRW), is an innovative middle-school program designed to teach the way students learn best—by thinking, talking and doing science. *Holt Science and Technology* is a series that has been shown to get results and make science real for students. The three-book series deals with life, earth and physical science.

HRW's science titles, including health, biology, chemistry and physics for high school students, take a multimedia approach to keep learners up to date with the latest discoveries.

Holt, Rinehart and Winston, a Harcourt Classroom Education Company, is a recognized leader in secondary educational publishing. Since 1866, the company has been in the business of helping teachers teach and students learn. HRW provides a wide range of instructional materials that includes curriculum-based textbooks, CD-ROMs, videodiscs and other support and reference materials.

To learn more, call 1-800-HRW-9799 or visit the company's Web site at www.hrw.com.
